Double-Sided Polishing Pads with **SMARTFIX®** TECHNOLOGY

SMARTFIX Double-Sided Polishing Pads are built for professional rotary polishing with maximum efficiency. Beyond the double-sided waffle face, the breakthrough is the **SMARTFIX** connector: attach or remove the pad in a single motion; no spinning, no threading, no tools. The connection locks solidly, even under heavy correction, so you focus on polishing, not pad changes.

The foams are engineered specifically for **SMARTFIX**: a more elastic, resilient formulation supports the added mass of a double-sided pad while maintaining comfort and control. The redesigned waffle pattern improves airflow, manages heat, and reduces drag for a smoother experience.

RUPES SMARTFIX® DOUBLE-SIDED TWISTED WOOL

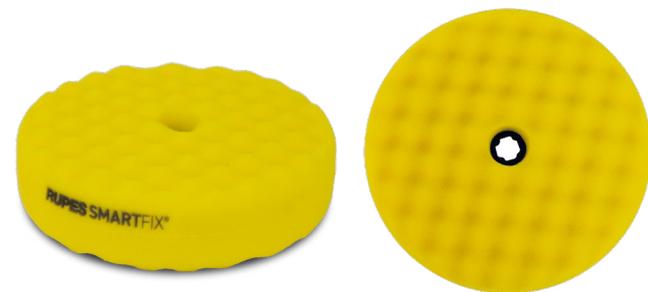

The SMARTFIX Twisted Wool Pad is engineered to deliver outstanding cutting power, reduced risk of rotary swirls, and improved process efficiency, all while providing a smooth, stable, and vibration-free polishing experience. Crafted with 100% natural wool, long recognized as one of the finest on the market, these pads ensure exceptional cutting performance, consistent results, and durability in even the most demanding correction tasks. The natural twisted wool construction guarantees fast and efficient defect removal while maintaining excellent control during rotary polishing. Designed to maximize performance when used with our Rotary Coarse Compound, XC2 or new marine compounds, XC100 and XC300, the SMARTFIX Twisted Wool Pad are fully compatible with the BigFoot LH19E and virtually any rotary polisher, provided with a SmartFix connector, making it the ideal choice for professionals seeking top-level efficiency and reliability.

RUPES SMARTFIX® DOUBLE-SIDED COARSE FOAM

The SMARTFIX Coarse Foam Pad is the most aggressive pad in our Double Side foams range. Made from a new high-performance blue foam, it has been specifically engineered to deliver the best results when used with a double side system. This pad ensures powerful defect removal and fast elimination of severe imperfections and sanding marks on painted surfaces. Thanks to its waffle face design, the pad provides excellent rotational stability while minimizing heat build-up generated by rotary motion. The unique structure also enhances polishing comfort, as the waffle pattern reduces the total surface contact, keeping the pad working at cooler temperatures and lowering the risk of overheating the paint. The SMARTFIX Coarse Foam Pad is designed to work seamlessly with the BigFoot LH19E and any other rotary polisher, provided with a SmartFix connector. For maximum cutting performance, we recommend pairing it with our Rotary Coarse Compound or XC2 or with new Rupes marine compounds XC100 and XC300.

RUPES SMARTFIX® DOUBLE-SIDED FINE FOAM

The SMARTFIX Fine Foam Pad is designed for the refinement stage, capable of removing moderate surface defects while delivering an excellent finish. Made from a new precision-engineered yellow foam, it has been specially developed to achieve maximum performance with double side systems, ensuring both efficiency and consistency during the polishing process. The waffle face design provides greater rotational stability and enhances user comfort by creating a smoother, more controlled polishing experience. Since the waffle pattern reduces full-surface contact, the pad operates at cooler temperatures, minimizing heat build-up and lowering the risk of damaging paintwork. Perfectly compatible with the BigFoot LH19E as well as any rotary polisher, provided with a SmartFix connector, the SMARTFIX Fine Foam Pad offers the ideal balance of correction and finish. For the best results, we recommend pairing it with our Rotary Fine Compound or Marine XF500 or XP700 Polishes.

RUPES SMARTFIX® DOUBLE-SIDED ULTRA-FINE FOAM

The SMARTFIX Ultra-Fine Foam Pad is the finest pad in the double-sided foam range, designed to remove light imperfections and deliver an exceptionally high-gloss finish. Made from a new soft, precision-engineered white foam, it has been specially developed to guarantee the best performance when used with double-sided systems, ensuring maximum refinement in the final polishing stage. Its waffle face structure provides excellent stability under rotary motion, making it the perfect choice for eliminating haze and micro-marring left by more aggressive polishing steps. The unique design enhances user experience while limiting full-surface contact. This allows the pad to operate at cooler temperatures, reducing heat build-up and minimizing the risk of paint damage. Compatible with the BigFoot LH19E and any other rotary polisher, provided with a SmartFix connector, the SMARTFIX Ultra-Fine Foam Pad delivers outstanding finishing results. For optimal performance, we recommend pairing it with our UNO Pure or Marine XF600 and XP700.

SMARTFIX® TECNOLOGY

The RUPES SMARTFIX system is a quick, tool-free solution for mounting double-sided rotary pads. Instead of using threads, the pad simply presses onto the dedicated SMARTFIX backing plate and locks with a secure mechanical click. To remove it, just pull it off—no spinning, no tools, no wasted time. This innovative system eliminates the risk of cross-threading and over-tightening, while providing a stable and reliable connection during heavy-duty polishing. Designed for professionals in detailing, body shops, and marine environments, SMARTFIX streamlines pad changes and maximizes workflow efficiency.
